

Scenarios/Test we tried on our FTP Client-Server program

Mohammed Arham (maj596) and Muhammad Areeb (maa1150)

- Incorrect usernames and passwords
- Performing server instructions without authenticating first
- Making sure that multiple clients can send messages to the server while one is transmitting a large file
- Multiple users trying to login at once to ensure that passwords and users don't get mixed up
- Invalid commands and inputs
- Incorrect commands
- Multiple people uploading and downloading files simultaneously
- Multiple people changing folders to upload and download data
- Putting non-existent files into the system
- Attempting to retrieve non-existent files
- Multiple users changing directory at the same time
